

3D Printing

Creative Printing and Internet Services, LLC. of Boone NC is proud to announce that we are the first print shop in the High Country of North Carolina to offer commercial 3D printing services. With this new technology, we can now offer our customers, including designers, hobbyists, architects and artists, a variety of new products. School projects, artistic pieces, and scaled projects are now available as 3D prints at Creative Printing and Internet Services, LLC.

3D printing uses an additive process to create 3D models. Starting from an STL file, the 3D printer reproduces a digital model by adding materials in layers until the final product is achieved. Use of the technology can assist with the creation of jewelry, landscaping, home design models, engineering products, or any prototype of your choice. Our new 3D printer prints with recyclable ABS plastic or compostable PLA plastic. Our customers can choose from a variety of colors including glow-in-the-dark.

We provide the High Country with outstanding print, sign, multimedia and web services. Stop by our office, located on the [1738 NC Highway 105 Bypass, Boone, NC](#) or [email us](#), to learn more about what we have to offer including our new 3D printer.
